**Heidi Mueller**

*Director*

The Illinois Department of Juvenile Justice has two goals:

- Make Illinois communities safer for all residents.
- Foster better life outcomes for youth in the Department's custody by providing appropriate and effective rehabilitation

In March 2015, the Department unveiled its comprehensive strategic plan focusing on five core principles:

- Right-Size: Reduce the use of secure custody for low-risk youth
- Rehabilitate: Improve programs to meet the needs of high-risk youth
- Reintegrate: Improve programs to ensure successful reentry
- Respect: Create a safe and respectful environment for youth and staff
- Report: Increase transparency and accountability

This monthly report is part of the Department's commitment to enhance reporting and transparency. This allows the Department to more effectively inform stakeholders and the public about operations and outcomes.

A mild attempt is defined as when a youth verbalizes, threatens, or gestures self-injurious behavior. A moderately severe attempt is defined as when a youth attempts self-harm, appears to be motivated by suicidal intent, and inflicts superficial harm to self that may require minor medical attention. A serious attempt is when a youth self-harms and inflicts harm to self that requires medical attention or whose attempt it believed to be potentially lethal and is scheduled for medical observation.

The Diagnostic and Statistical Manual of Mental Disorders, 5<sup>th</sup> Edition (DSM-5), is a commonly used tool in psychology to provide standard criteria and descriptions of mental disorders. It contains a variety of disorders including depression and bipolar disorder and also includes diagnoses of conduct disorder and substance abuse disorder. Nationally, research estimates that between 40 and 60 percent of incarcerated juveniles have a diagnosable mental disorder. These estimates typically exclude substance and conduct disorders.

Each IDJJ facility maintains an in-house substance abuse treatment program. The facilities utilize education and group therapy to help decrease future substance use. The number of treatment participants is the total number of youths enrolled in a substance abuse program during the month of interest. Due to treatment failure, drop out, and rolling acceptance, the number reported tends to be higher than the actual number enrolled at one time. Primary substance abused is the primary drug of choice for a youth in treatment.

School District 428 offers three types of diplomas for students: 8<sup>th</sup> grade, high school, and general equivalency. The District offers blended learning, utilizing both online and in-person instruction. An estimated 10% of youth admitted to the Department earn some sort of diploma during their stay. Nationally, it is estimated that 40% of youth held in juvenile facilities have a need for special education services. School district data collected on the final day of the month.

Reportable incidents measure incidents of disruption in a correctional facility. The numbers provided are rates per 100 youth in IDJJ custody. Youth on youth assaults occur when one or more youths strike another youth or youths. Youth fights occur when two or more youth mutually engage in a fight. Youth on staff assaults occur when one or more youth commit physical violence against one or more staff members.

<b>IDJJ Total</b>	90	60	62	57	40	69	61	42	26	50	29

Uses of mechanical restraints refer to the temporary application of handcuffs with force. The numbers provided are the total number of instances per facility per month. If multiple youth are placed in mechanical restraints at the same time it is counted as two instances. After any use, youth are checked by medical professionals.

**Table 15: Uses of Confinement for May**

	Number of Uses	Rate of Usage per 100 Youth	Average Length of Hold in Minutes
<i>Behavioral Holds</i>	130	44.0	93.6

Effective January 2019, IDJJ began utilizing new policies and procedures regarding the use of confinement and removal of youth from regular programming and housing. These policies and procedures redefine “confinement” and create subtypes based on the reason for use. The Department also developed new ways of measuring the use of confinement. To aid public understanding of confinement use, data are presented as the number of behavioral holds, the rate of use per 100 youth in each facility, and the average length of confinement in minutes. A behavioral hold is a status assigned to a youth who is confined to their own room or a designated area when they are engaged in dangerous behavior that poses a serious and immediate threat to their safety, the safety of others, or the security of the youth center.
